Evaluation runs: 2pc (a1-commit)

generated 2026-11-05 from brain-data cfc25f174 2026-11-05 13:40:01 +0100

Every campaign run on this benchmark, one row per instance (variant, specification, communication model, size) and engine; the newest run of an instance wins. Expected verdicts (the rule file): correct: expected conforms (n=1 is refused: the program never spawns visible p1); control-reverse: expected conforms (n=1 is refused: the program never spawns visible p1); eager: expected violation (n=1 is refused: the program never spawns visible p1); early-abort: expected violation (n=1 is refused: the program never spawns visible p1); silent: expected violation (n=1 is refused: the program never spawns visible p1). Blue rows are at the current pins (TraceForge 367cdc6, whose predecessor 9a0629e is equivalent for every engine but the join; merge join 367cdc6; JMC 3c43b2d2): a rerun gives the same result. Red rows are superseded (an older pin, or the in-memory join that the merge join replaces) and their rerun is pending. A planned instance without a measurement is not a row: it is listed under "Not run". G_{spec}, G_{impl} = the graphs of the specification and of the implementation (the stateless engine's own count of specification graphs explored, repeats included, is G^{expl}_{spec}); G_x = the implementation graphs no specification graph covers (violating pairs); T = wall seconds; M = peak resident MiB; tier = the run's time and memory limits; * marks a verdict other than the expected one; 🕓 = the time tier was reached; oom = the memory limit was reached.
